PREFACE

The Ninth Agricultural Census was conducted in the State as a part of the All India Programme organized by the Government of India, Ministry of Agriculture, with 2010-11 as the reference year.

In this census, the particulars relating to number and area of operational holdings were collected from all villages during 1st Phase while the data pertaining to other characteristics viz., Tenancy, Land utilization, Irrigation and Cropping pattern was collected during 2nd Phase from 20 percent of the villages by retabulating the information available in the village records for the year 2010-11. During 3rd Phase additional information on the use of inputs like Fertilizers, Manures, Pesticides, Seeds etc., was collected from 7 percent of the villages in the State with 2011-12 as the reference year under Input Survey.

The results of the 1st Phase of Agricultural Census, i.e. Number and Area of operational holdings are presented in this report. It throws light on the distribution of holdings according to prescribed size groups such as Marginal, Small, Semi-Medium, Medium and Large and also holdings operated by Male and Females. The data on Number and Area of holdings operated by All Social Groups and Institutions are presented separately in this report.

I place on record my appreciation to all the officers of the State and Districts who are associated in conduct of this Census.

I hope this report will be useful to the Planners, Policy makers in the field of Agricultural Economy, Research Scholars and others.

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

I 9th Agricultural Census 2010-11

1. Introduction

- 1.1 Agricultural Census forms part of a broader system of collection of Agricultural Statistics. It is a large-scale statistical operation for the collection and derivation of quantitative information about the structural aspects of Agriculture in the State. An Agricultural operational holding is the ultimate unit for taking decision for development of Agriculture at micro level. It is for this reason that an operational holding is taken as the statistical unit for data collection and for describing the structure of Agriculture. Through Agricultural Census it is endeavored to collect basic data on all the important aspects of Agricultural economy for all the operational holdings in the country. Aggregation of data is done at various levels of administrative units.
- 1.2 Periodic Agricultural Censuses are important, as they are the main source of information on basic characteristics of operational holdings such as land use and cropping pattern, irrigation status, tenancy particulars and the terms of leasing. This information is tabulated by different size classes and social groups including Scheduled Castes/Scheduled Tribes which are needed for development planning, socio-economic policy formulation and establishment of national priorities. The census also provides the basis for the development of comprehensive integrated national system of Agricultural statistics and has links with various components of the national statistical system. The whole project of Agricultural Census in the country is implemented in three distinct phases, which are statistically linked together but focus on different aspects of Agricultural statistics. In Phase –I, a list of holdings with their area and social characteristics of the holders is prepared. In Phase – II, detailed data on Agricultural characteristics of holdings are collected from selected villages. In phase – III, data on input use pattern are collected from selected holdings in selected villages. Thus the whole operation of Agricultural Census in Andhra Pradesh is a combination of Census and Sample Survey, which reflects whole characteristics of Agricultural operational holding.
- 1.3 Agricultural Census is conducted following broad guidelines for the decennial World Census of Agriculture conducted by Food and Agriculture Organisation of UN. Andhra Pradesh has been participating in World Agricultural Census Programme for more than four decades. The first Statewide comprehensive Agricultural Census was conducted in 1970-71 (1st July 1970 to 30th June, 1971) as the reference period as part of the 1970 World Agricultural Census and subsequently Agricultural Census were conducted in Andhra Pradesh during 1976-77, 1980-81, 1985-86, 1990-91, 1995-96, 2000-01 and 2005-06. The present Agricultural Census is organized with 2010-11 (1st July, 2010 to 30th June, 2011) as the reference period. It is the Ninth Agricultural Census in the State.

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

2. Objective

2.1 The main objective of the Agricultural Census are:

- (i) To describe the structure and characteristics of Agriculture by providing statistical data on operational holdings, including land utilization, live-stock, Agricultural machinery and implements, use of fertilizers etc.
- (ii) To provide benchmark data needed for formulating new Agricultural development programmes and for evaluating their progress.
- (iii) To provide basic frame of operational holdings for carrying out future Agricultural surveys and
- (iv) To lay a basis for developing an integrated programme for current Agricultural statistics.

3. Methodology

- 3.1 The data on the number and area of operational holdings according to different size-classes, social groups and gender wise would be collected and compiled on complete enumeration basis through re-tabulation of information available in the Village Land Records. This would imply covering all the survey numbers in each village and preparing a list of 'Operational Holdings' there from. An **operational holding** is the basic unit of enumeration. **The holding of the actual cultivator is the unit for collection of data but not the owner.** Some holdings may not be located completely within the village and they may be spread over to other villages. For preparation of a list of operational holdings, necessary matching of the part-holdings scattered over more than one village has to be done. A holding may cut across the boundary of a village / Mandal / District / State. As in the previous Census, the mandal will be the outer limit for pooling of all the parcels of an operational holding. If a holding is spread over more than one mandal, that part of holding which is lying outside the mandal of residence of operational holder will be treated as a separate operational holding.
- 3.2 For collection of detailed data, viz., (i) distribution of holdings according to the tenancy status; (ii) area under different land uses; (iii) distribution of holdings according to irrigation status; (iv) area irrigated source-wise and (v) area under principal crops, 20 percent of the villages in each mandal selected randomly would constitute the base. These 20 percent villages will be those selected for Timely Reporting Scheme (TRS) for the reference year of Agricultural Census. In these 20 percent villages, information relating to the above characteristics would be compiled from the basic village land records, viz., Adangal/Phani in respect of all the resident cultivators. Resident cultivators of urban areas will also be covered.

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

- 3.3 Part-holdings are to be pooled in the village of residence of the operational holders. Necessary pooling of the part holdings has to be done before preparation of Table-1 for the village. Once Table-1 is prepared, part holdings would have been fully accounted for and the list of operational holdings of a village will be those belonging to the resident cultivators.

4. The Schedules

- 4.1 There are three listing schedules which are as follows:

Schedule L-1 : List of resident operational holders and area operating in the village.

Schedule L-2 : List of non-resident operational holders and area operated in the Village.

Schedule L-3 : Village Summary.

5. Concepts & Definitions

- 5.1 In all the listing Schedules L-1 and L-2, the primary unit of enumeration (statistical unit) is the 'Operational Holding', which is defined as '**All land, which is used wholly or partly for Agricultural production and is operated as one technical unit by one person alone or with others, without regard to the title, legal form, size or location**'. However, for L-3 the basic statistical unit is the village.
- 5.2 The primary workers should ensure, before listing any operational holder, whether he has actually put his land, wholly or partly to Agricultural production during the reference Agricultural year. In case the holder has put his entire land to non-Agricultural use during the reference year and has kept it fallow during the preceeding year also, such holder will not qualify as an operational holder, and hence will not be listed. If the entire area is kept as current fallow in the reference year but some part of it was cultivated during the previous year, such area will be treated as on operational holdings. An operational holding would include both the cultivated and uncultivated land. If both net area sown and current fallow are zero during the reference year, such holding will not be considered as an operational holding although some area may exit in other part (s) of the classification of land use.

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

Operational Holding

All land which is used wholly or partly for Agricultural production and is operated as one technical unit by one person alone or with others without regard to the title, legal form, size or location.

Technical Unit

A technical unit has been defined as that unit which is under the same management and has the same means of production such as labour force, machinery and animals.

Agricultural Production

Agricultural production includes growing of field crops, fruits, grapes, seeds, tree nurseries (except those of forest trees), vegetables and flowers, production of coffee, tea, cocoa, rubber, jute, oilseeds, fodder grass, etc. Grass would be treated as a crop if special efforts are made to raise it.

Operated area

Operated area would include both cultivated and uncultivated area, provided part of it is put to Agricultural production during the reference period. If, for instance, an operational holding consists of four survey numbers out of which one survey number is put to non-Agricultural uses, the total area of the operational holding will be equal to the total geographical area of all the four survey numbers.

It would also cover the land occupied by the farm buildings, including the house of the holder, provided such buildings are located within the operated area. If the farm buildings are located outside the cultivated area and are covered under abadi area, such buildings would not be included.

Operated area would exclude Government forest land, Government waste land, village common grazing land, abadi area etc. If Government wasteland is allotted to an individual for Agriculture purpose then it will be included in the holding.

If the entire area of the holding (the area of all the survey numbers of an operational holding) is put to non-Agricultural use and/ or it is under old fallow, it will not be considered as operated area. If, however, the entire area of operational holding is under current fallow during the reference year but was cultivated in the preceding year, this would still be considered as operational holding.

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

In some cases, land is divided amongst all the members of the family. Where it is divided between the husband, wife and minor children and the cultivation is being done by the husband as the head of the family, the land may appropriately be treated as one operational holding.

There might be cases where in the records, a holding is shown jointly in the name of more than one co-sharer while in fact the land may have been privately divided and the co-sharers are independently cultivating. In such cases where there is no dispute, they should be treated as many operational holdings as the number of independent cultivators. This is necessary because in Agricultural Census, the data is to be collected on the basis of **de facto position** rather than de jure position.

Some times name of three or four persons are shown. While from the records it would appear that there is only one holding, in practice, all the three or four brothers are actually cultivating the land independently of each other although there is no legal partition of land. From the Census point of view, this would constitute three or four operational holdings.

For cultivated areas in the State Forests, no detailed land records are prepared. In the absence of revenue records such area are **excluded** for Census purposes.

The operated area may comprise of:

- Land owned and self operated.
- Land leased in
- Land otherwise operated

Land owned and self-operated: Land for which the cultivator has the right to permanent heritable possession would be considered as owned. This would include Land held from Government or others under grant or lease or assignment with right of permanent heritable possession with or without right of transfer.

- Land operated under perpetual lease.

Self-operated land would include:

- Self cultivation.
- Land cultivated through members of the family
- Land cultivated with the help of hired labour. Land owned and self operated should not include land leased out to others.

Leased in: Area leased in is defined as land taken on lease from others without any permanent right of possession for the lessee. Land may be leased in for:

- Fixed money
- Fixed produce
- Share of produce

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

- Usufructuary mortgage: Ownership of the property remains with the mortgager but the possession is with the mortgagee (i.e, the person to whom the mortgage is made or given). Income from the property accrues to the mortgagee and the mortgage is terminated as soon as the full amount is realized.
- Other terms to be specified.

Area otherwise operated: This would include encroachment of land, land forcibly occupied, unauthorized or land in dispute etc., which cannot be treated as owned or leased in, as per the definitions given above.

1. Operational holder

An operational holder is the person who has the responsibility for the operation of the Agricultural holding and who exercises the technical initiative and is responsible for its operation. He may have full economic responsibility or may share it with others. The operational holder may be individual / joint/ Institutional.

1. **Individual:** If the holding is being operated either by one person alone or by group of persons who are the members of the same household it will be considered as an individual holding.
2. **Joint:** If two or more persons belonging to different households, share jointly as partners in the economic and technical responsibility for the operation of an Agricultural holding, such holding would be considered as joint.
3. **Institutional:** Holdings such as Government farms, sugarcane factory farms, cooperative farms, lands managed by trust would be treated as Institutional.

2. Resident and Non-resident operational holder

All the cultivators **residing** in a particular village and cultivating some land within the same Mandal are resident cultivators of that village irrespective of the fact whether they are cultivating land in that village or not. A resident cultivator may, therefore, have either (i) entire area of the holding located in the village of his residence; or (ii) partly within the village of residence and partly outside; or (iii) entirely outside the village of residence.

An operational holder operating area **outside the Mandal** in which his village of residence falls, will not be treated as a resident cultivator of the village of his residence for Agricultural Census purposes. He will be treated as a resident cultivator of the village outside the Mandal where the area falls.

If the area in a particular village is operated by a cultivator who resides outside that village but within the same mandal, he is a non-resident operational holder for

CENSUS OF LAND HOLDINGS (2010-11) ANDHRA PRADESH

that area. However, if this operational holder is resident of a village lying outside the Mandal in which the area is located, he will be treated as a resident operational holder (**deemed resident**) of the village, where the area is located.

Complete/Part-Holding

A holding is said to be complete holding if the entire operated area of that holding is located in one village. If the operated area is spread over more than one village, it would be considered as part-holding.

Mandal would be taken as the outer limit for consolidation of part holdings.

Collection and Computerisation of data

The work of printing of schedules was completed in August, 2011 and training classes were conducted during September/ October, 2011 both at District and Mandal levels. Retabulation of data was commenced in October 2011 and the entire work was completed in May, 2012. Village wise, operational holding wise data has been computerized by engaging data entry operators at mandal level under the close supervision of Assistant Statistical Officers, who are well trained with the basic concepts. For this purpose, software was developed and test checks were carried and found good and feasible. Accordingly, the whole computerization work including data entry, validation, updation and making data error free was completed and State Table-1 was submitted to the Government of India in May, 2012.

The number of holdings operated by Other than Scheduled Castes & Scheduled Tribes have gone up from 61.35 lakhs of 2005-06 to 65.16 lakhs in 2010-11 Census and thereby showing an increase of 6.21 percent. Whereas the area operated by Other than Scheduled Castes & Scheduled Tribes has decreased from 71.50 lakh hectares to 70.65 lakh hectares and showing a marginal decrease of 1.19 per cent. In the size classes, up to 2.0 hectares, both holdings and area showed an increasing trend. In the remaining size classes ranging between 2.0-3.0 to 20.0 hectares and above, the number and area showed declining trend. The increase in sizes classes up to 2.0 hectares is mainly due to splitting of joint pattas and distribution of land to the land less poor under various developmental programmes of the Government.

WHAT THIS BOOK SPEAKS ABOUT

The Ninth Agricultural Census was conducted in the State as a part of the All India Programme organized by the Government of India, Ministry of Agriculture, with 2010-11 as the reference year.

In this census, the particulars relating to number and area of operational holdings were collected from all villages during 1st Phase while the data pertaining to other characteristics viz., Tenancy, Land utilization, Irrigation and Cropping pattern was collected during 2nd Phase from 20 percent of the villages by retabulating the information available in the village records for the year 2010-11. During 3rd Phase additional information on the use of inputs like Fertilizers, Manures, Pesticides, Seeds etc., was collected from 7 percent of the villages in the State with 2011-12 as the reference year under Input Survey.

The results of the 1st Phase of Agricultural Census, i.e. Number and Area of operational holdings are presented in this report. It throws light on the distribution of holdings according to prescribed size groups such as Marginal, Small, Semi-Medium, Medium and Large and also holdings operated by Male and Females. The data on Number and Area of holdings operated by All Social Groups and Institutions are presented separately in this report.

This report will be useful to the Planners, Policy makers in the field of Agricultural Economy, Research Scholars and others.

The copies of this report are available at
